

Module 4: An introduction to systems and the System LifeCycle (SLC) Session 2 of 5

Rev. 3.4.5

Creating Outstanding Systems Engineers

4-39

Knowledge

- Lecture
 - Overview and summary of readings
- Readings
 - 0402 Kasser J.E., Holistic Thinking: Chapter 7, The nature of systems, Createspace, 2015
 - 0403 Systems Engineering Chapter 5 An Introduction to Systems
 - 0404 Kasser J. E., Perceptions of Systems Engineering: Chapter 18, guidelines for creating a system, Createspace, 2015
 - 0405 Systems Engineering Chapter 8 The Systems Lifecycle
 - 0406 Systems Engineering Chapter 17 The nuts and bolts of systems
- Exercises

Creating Outstanding Systems Engineers

4-40

Topics

- Nature of systems
- Basic system behaviour
- Emergence
- Hierarchies of systems
- **Functional view of a system**
- Template for a system
- Supply chains
- Ways of creating systems for managing complexity
- The system lifecycle

Creating Outstanding Systems Engineers

4-41

Man-made system

- Generally has a purpose (what it was designed for)
- A solution to a problem
- Think functions
- Total solution = functions performed by solution system (product) + functions performed to realize the solution system (process).
 - $TS = \sum (f_s + f_p)$
- Think product and process functions in the conceptual stages

Creating Outstanding Systems Engineers

4-42

Thinking functions keeps options open

- “Communicating” function
- Realization options
 - Wireless
 - WiFi
 - 4G or 5G
 - Proprietary
 - Cable
 - Ethernet
 - Others
 - Combinations

Creating Outstanding Systems Engineers

4-43

Thinking functions keeps options open

- “Destroy specific distant target” function
- Realization options
 - Piloted aircraft with various ordnance
 - UAV – automatic
 - UAV – piloted by remote control
 - UAV – mixture of manual and automatic
 - Surface to Air Missile
 - Combinations
 - Others

Creating Outstanding Systems Engineers

4-44

Creating functional subsystems

- Options or choices
 - Top down
 - Bottom up
 - Middle out
 - Combination of above
- Group functions in accordance with rules for aggregation or synthesis
 - N² chart is a useful tool for
 - Grouping
 - Determining coupling between functions

Creating Outstanding Systems Engineers

4-45

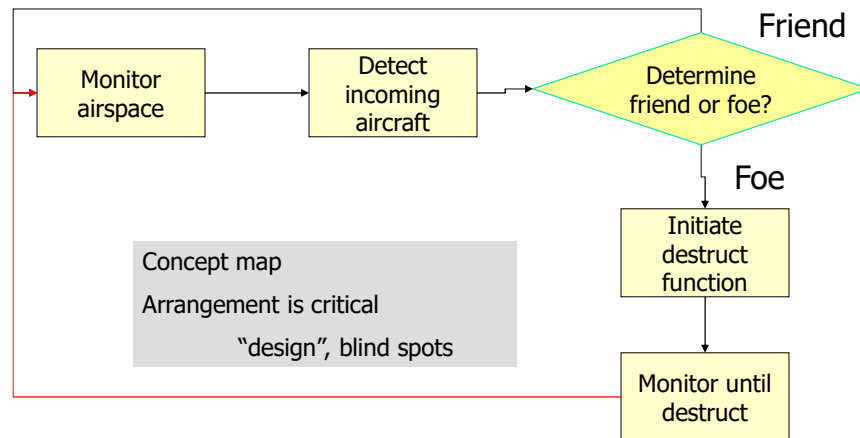

Example: Air Defence System (ADS) functional operations concept

- Scenario Title
 - What the system does
 - Defend **country/city/airfield** from air attack
 - Content
 - What the system does to perform its mission
 - Detects incoming aircraft
 - Launches interceptors to shoot them down
 - Hierarchy
- Callouts:
- Critical
 - What is the support needed, how does it work?
 - What type?, from where?
 - Manned, unmanned?

Creating Outstanding Systems Engineers

4-46

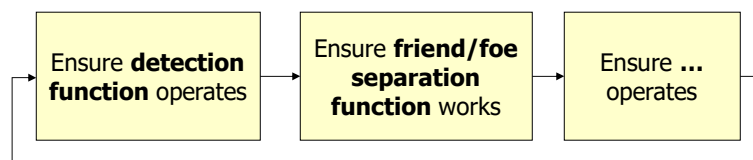

Incorrect ADS Partial functional flow (mission)

Creating Outstanding Systems Engineers

4-47

ADS Partial functional flow (one support scenario)

- Parallel functions or serial functions
- Depends on
 - resources
 - people, time, equipment
- In software, this should be run continuously in background

Creating Outstanding Systems Engineers

4-48

Capability and dependability

- Definition
 - Having the functionality needed, at the time it is needed, at the place it is needed to perform the needed mission
- Attributes of capability are also known as dependability, e.g.
 - Operational
 - Human factors
 - Reparability
 - Maintainability
 - Survivability
 - Error tolerance
 - Availability
 - Reliability
 - Safety
 - Security

Mission and support
functions
cooperatively
provide capability

Creating Outstanding Systems Engineers

4-49

Non-functional dependability attributes

- Reflect the extent to which the system is
 - Operational
 - ... **performs mission functions as specified**
 - Reparable
 - ... can be repaired in the event of a failure
 - Maintainable
 - ... can be kept operational;
 - Survivable
 - ... can perform mission functions as specified whilst under hostile attack;
 - Error tolerant
 - ... can avoid and tolerate [input] errors.
- Others

Creating Outstanding Systems Engineers

4-50

Topics

- Nature of systems
- Basic system behaviour
- Emergence
- Hierarchies of systems
- Functional view of a system
- **Template for a system**
- Supply chains
- Ways of creating systems for managing complexity
- The system lifecycle

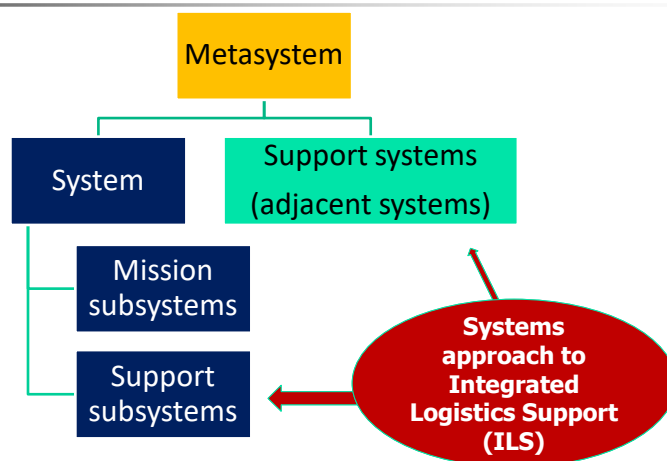

Creating Outstanding Systems Engineers

4-51

Structure of a system

Creating Outstanding Systems Engineers

4-52

Structural perspective: System function template

Creating Outstanding Systems Engineers

4-53

System functional template

- **Mission** – the functions which the system is designed to perform to provide a solution to the problem as and when required.
- **Support** – the functions the system needs to perform in order to be able to perform the mission as and when required.
 - **Resource management** – the functions that acquire, store, distribute, convert and discard excess resources that are utilized in performing the mission (Hitchins, 2007: pages 128-129).
 - **Viability management** – the functions that maintain and contribute to the survival of the system in storage, standby and in operation performing the mission (Hitchins, 2007: pages 128-129).

Creating Outstanding Systems Engineers

4-54

Missions and support

- Missions (*Big Picture*)
 - Military
 - Peacetime
 - Wartime
 - Commercial
 - Production
 - Distribution
 - Service
 - Supply
 - Retail and wholesale
- Scenarios (*Operational*)
 - What the system does
 - What is done to support the mission
 - Drive requirements and design of system and support system
- Functions (*Functional*)
 - Activities performed in the mission and support scenarios

Creating Outstanding Systems Engineers

4-55

Aircraft scenario to function mapping

Functions	Scenarios				
	Takeoff	Inflight	Safe landing	Ground movement	Lollygagging
Braking	M		X	X	
Controlling	X	X	X	X	
Lifting	X	X	X		
Navigating		X			
Sideways	X	X	X	X	
Thrusting	X	X	X	X	
Thumping					

Creating Outstanding Systems Engineers

4-56

Template for a data processing system (Mission functions)

Creating Outstanding Systems Engineers

4-58

Exercise 4-21

1. Your home is a system
2. Conceptualize the mission and support systems from the Functional HTP
 1. Group them into functional mission and support systems and subsystems
 1. Use ***ing**, e.g. **drinking**, **eating**, **speaking**, etc.
 2. Use concept maps and N² charts to show how the systems and subsystems seem to be arranged
3. Prepare a <5 minute presentation containing
 1. The formulated problem per COPS problem formulation template
 2. This slide and the lesson version number
 3. A representative sample of both sets of mission and support functions
 4. The scenarios or use cases
 5. A compliance matrix for the exercise
 6. Lessons learned from exercise
4. Save as a PowerPoint file in format Exercise4-21-abcd.pptx
5. Post/email presentation as, when and where instructed

Creating Outstanding Systems Engineers

4-59

Exercise 4-22

1. Convert the mission and support systems from exercise 4-21 into physical components (*Structural* perspective)
2. Conceptualize at least 2 well-written text format requirements for 'ilities' for each physical subsystem, e.g. the availability shall be 24 hours a day, 7 days a week
3. Prepare a <5 minute presentation containing
 1. The formulated problem per COPS problem formulation template
 2. This slide and the lesson version number
 3. A representative sample of the requirements
 4. The scenarios or use cases
 5. A compliance matrix for the exercise
 6. Lessons learned from exercise
4. Save as a PowerPoint file in format Exercise4-22-abcd.pptx
5. Post/email presentation as, when and where instructed

Creating Outstanding Systems Engineers

4-60

Exercise 4-23 knowledge reading

1. Prepare a brief on two main points in reading 0403 (< 5min)
2. Presentation to contain
 1. Formulated problem per COPS problem formulation template
 2. A summary of the content of the reading (<1 minute)
 3. The compliance matrix
 4. This slide and the lesson version number
 5. A list of the main points
 6. The two briefings
 7. Reflections and comments on reading (<2 minute)
 8. Comparisons of content with other readings and external knowledge
 9. Why you think the reading was assigned to the module
 10. Lessons learned from module and source of learning e.g. readings, exercise, experience, etc. (<2 minutes)
3. Save as a PowerPoint file as Exercise4-23-abcd.pptx
4. Post/email presentation as, when and where instructed
5. Brief on one main point

Creating Outstanding Systems Engineers

4-61

Any questions ?

1. Best
2. Worst
3. Missing
